### Professional Summary:

- Having 3+ years of IT experience as a software developer in various applications.
- Good knowledge and Hands on experience in core Java, JavaScript, Spring IOC, shell scripting and Python
- Experience in Application Development, Application Maintenance and bug fixing.
- Good team player and also ability to work independently in my module.
- Understanding end to end feature functionality and experience in providing training for fresher's as I prepared few transition sessions for new joiners.
- Working for Cisco Products for past 3.6 years. Also, I wrote few tech zone articles which were posted in cisco forum on knowledge base.
- Experience in writing shell scripts for backend process (Installation/Upgrade/ CronJobs and for automation of data purging).
- Experience in working on VMware VSphere client and experience in Linux utility commands usage.
- Knowledge on Web Applications using Python's Django framework as a full stack developer.

### Project:

**Title:** Cisco Prime Infrastructure.

**Client:** Cisco Systems, Inc.

**Role:** Software Developer.

**Environment:** Core JAVA, Shell scripting and Python.

**Description:**

Cisco Prime Infrastructure is a network management tool that supports lifecycle management of your entire network infrastructure from one graphical interface. Prime Infrastructure provides network administrators with a single solution for provisioning, monitoring, optimizing, and troubleshooting both wired and wireless devices. Robust graphical interfaces make device deployments and operations simple and cost-effective.

**Responsibilities:**

1. Feature development of our application. Defect fixing related to backend and UI issues as identified internally and in customer use.
2. Experience in Core Java, Python Scripting and Linux command usage.
3. Written python script to continuously monitor the MIB processor directory and provide Stable and default values on the fault notifications.
4. Written Python Scripts for data filtration from DB to CSV files for providing raw data.
5. Handled few customer issues by fixing them in live servers.
6. Developed fault notification for background jobs as a **value add** to the product.

**Project:**

Title: Cisco Works LMS.

Client: Cisco Systems, Inc.

Role: Developer and Escalation engineer.

Environment: Core JAVA, Shell scripting and Python

**Description:**

Cisco Works LMS provides you with powerful features that enable you to configure, monitor, troubleshoot, and administer Cisco networks.

It has the options for the following underlying core functions:

Monitoring, Inventory Management, Configuration, Reporting, Administration and Work Center Management.

**Responsibilities:**

- Demonstrating the developed features in the Engineering meetings and marketing demos as in agile methodology concerns.
- Having knowledge on agile process model and done localization for our application.
- Defect fixing related to backend and UI issues as identified in customer use.
- Unit testing and executed test cases from end to end
- Handling customer issues in live servers and fix them with concrete solution.

**Achievements:**

1. Received appreciation from Project lead for good team player.
2. As a team, we were successful in bringing new features to the product meeting client expectations.
3. Received live wire award for actively reaching set targets.
4. Received "Productivity award" from the client CISCO.
5. Successfully achieved Set Targets. Received an award on Best performer for fixing few customer issues.

**Declaration:**

I do hereby declare that the above-mentioned information is true to the best of my Knowledge.
